7. Notes

1) Circuit design

In circuit designing, make allowance for the degradation of the light emitting diode output that results from long continuous operation. (50% degradation/5 years)

2) Prevention of detection error

To prevent photointerrupter from faulty operation caused by external light, do not set the detecting face to the external light.

3) Position of opaque board

Opaque board shall be installed at place 1.4mm or more from the top of elements.

(Example)

4) Soldering

To solder onto lead pins, solder at the position of 0.3mm or more from the package's bottom at 260°C for 3 s or less.

Please don't bend lead pins from the root of package when soldering.

Please also take care not to let any external force exert on lead pins.

Please don't do soldering with preheating, and please don't do soldering by reflow.

Please have soldering adjustment, etc. after GP1S194HCZ0F is cooled down, and also note that the outer mold resin may be meltdown by heating for a long time.
